

ALGO VECTOR

Expert Advisor (EA) Backtesting Instructions

Important: Backtests for our EAs must be performed on the **M30 (30-minute) timeframe**. Before starting, confirm the correct trading symbol/pair for the specific EA in the product description on our website.

Before You Start

Each Algo Vector EA is designed for a particular trading instrument. Go to the product page for the EA you want to test and read the product description to identify the correct symbol/pair. Use that same symbol in the MetaTrader 5 Strategy Tester.

Backtest Start Dates & August 2026 Lock

The downloadable EA versions are intentionally provided for **backtesting purposes only**. To obtain a useful historical test period, start the backtest from the year shown below.

EA	Start Backtest From
Gold Throne Strategies	2024
Velon	2024
Stervex	2024
Cryptheon	2023
Aurexon	2024

Please note: All of these backtest versions are date-locked to **August 2026**. Because of this restriction, the EA may not open trades when you attempt to backtest beyond its lock date. This is intentional and does not necessarily indicate a problem with the EA or Strategy Tester.

How to Backtest the EA

1. Install the EA	Install the backtest version in MetaTrader 5 and confirm that it is available in the platform.
2. Open Strategy Tester	Open the MetaTrader 5 Strategy Tester and select the EA you want to backtest.
3. Select the Correct Symbol / Pair	Check the product description on the Algo Vector website and select the exact symbol/pair stated for that EA.

4. Set the Timeframe to M30	Select M30 (30 Minutes) . Our EA backtests must be performed on this timeframe.
5. Select the Historical Period	Use the recommended starting year in the table above. Do not expect the backtest-only EA to continue opening trades after its August 2026 lock date.
6. Configure the Test	Choose the historical period and configure the EA inputs you want to evaluate. Other tester settings can be selected according to the test you are performing.
7. Start and Review the Backtest	Run the test and review the results, graph, trading activity, and report after MetaTrader 5 finishes processing the historical data.

Continue Checking Current EA Activity

After the backtest lock period, you can continue to review the available performance and trading activity of our EAs through the **live signals / live trading information** available on the Algo Vector website.

Don't Know How to Backtest?

Please watch our video showing how to backtest Algo Vector EAs if you are not familiar with MetaTrader 5 backtesting or the Strategy Tester.

Quick Checklist

Check	Requirement
Symbol	Use the symbol/pair stated in the EA's product description
Timeframe	M30 (30 Minutes)
Start Date	Use the recommended starting year for the specific EA
Lock Date	Backtest-only versions are locked to August 2026
After Lock	Review available live signals/live trading information on the website
Help	Watch the Algo Vector backtesting video if needed

Backtesting Notice: Backtest results are based on historical data and simulated testing conditions. They do not guarantee or predict future trading results. Results can vary due to data quality, broker conditions, spread, settings, symbol specifications, and the selected testing period. Live trading activity can also differ from historical backtests.
